

# Garments to order for women expecting a baby. Transport, Import & Storage

## Question 1

**If you are ordering products from a factory or wholesaler that is far from your place; find out which mode of transport is possible for you (by air, ship, train, truck, ...) and:**

-Estimated delivery time

- Manufactured garments: 6 month from order date and 2 weeks after production is ready. 6 month includes 1 month extra for unexpected issues.
  - By air
- From wholesaler: Delivery time by truck is 1 week from order date.

-Estimated costs

- Garments from factory. 2 (dollars/euro/pound) per item when minimum is there for air freight. Domestic arrival transport is extra.
- Wholesaler: Different prices depending on which wholesaler and quantity ordered. When we order a above a given minimum level transport costs are included without any extra cost – so we should try to only order so much that we get free transport.

## Question 2

**If you will need to have an import handling when the goods arrive:**

-Who will do it, yourself or will you use an agent for the same?

- First shipment we will use a import agent. Then we will train one person to be able to handle the same.

-What's the extra cost for using an agent?

- About 150 (dollar/euro/pound)

## Question 3

**If you will have a storage or storage function:**

-Will you handle this yourself or use external service for the same?

- External service, a company specialist on helping online shops with storage and sending out products.

-What system will you have to keep track on your products in store?

- The external service company will handle this, and we will have a login into their web page where we can get all info. Plus a software that we can integrate with our customer management digital system.

-What costs will you have for the storage function?

- 150 per month, plus 25 per arrival of goods subject to that its packed as per their instructions, plus 0:50 per sent out product. (Actual costs for transport not included.)
